	Number and Quantity			
5.NBT.A.	Number & Operations in Base Ten:			
	Understand the place value system.			
1	Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left.	2, 3 SB: 1-1	41, 42, 45 SB: 1-1, 21-1, 23-1, 23-3, 23-4	
2	Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.	SB: 8-3	63 SB: 27-4, 28-3, 28-7	
3	Read, write, and compare decimals to thousandths.			
За	Read and write decimals to thousandths using base-ten numerals, number names, and expanded form, e.g., $347.392 = 3 \times 100 + 4 \times 10 + 7 \times 1 + 3 \times 1/10 + 9 \times 1/100 + 2 \times 1/1000$.		41-46 SB: 21-1 to 21-3, 22-1, 22-2, 23-1, 26-1	
3b	Compare two decimals to thousandths based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.		49-51 SB: 24-1, 24-2	
4	Use place value understanding to round decimals to any place.		52, 53 SB: 51-1 to 51-3	
5.NBT.B.	Number & Operations in Base Ten: Perform operations with multi-digit whole numbers and with decimals to hundredths.		35. 31-1 to 31-3	
5	Fluently multiply multi-digit whole numbers using the standard algorithm.	32, 36, 37 SB: 8-2, 8-4 to 8-7		

	I=	Uaa ia	П	1
6	Find whole-number quotients of whole	39-48		
	numbers with up to four-digit dividends and	SB: 10-1 to 10-6,		
	two-digit divisors, using strategies based on	9-2 to 9-5		
	place value, the properties of operations,			
	and/or the relationship between multiplication			
	and division. Illustrate and explain the			
	calculation by using equations, rectangular			
	arrays, and/or area models.			
	-		54.00	
7	Add, subtract, multiply, and divide decimals to		54-63	
	hundredths, using concrete models or		SB: 26-2 to 26-4,	
	drawings and strategies based on place		27-1 to 27-6, 28-1	
	values, properties of operations, and/or the		to 28-7, 45-2, 45-5	
	relationship between addition and subtraction;			
	relate the strategy to a written method and			
	explain the reasoning used.			
5.NF.A.	Number & Operations—Fractions: Use			
	equivalent fractions as a strategy to add			
	and subtract fractions.			
1	Add and subtract fractions with unlike		19-23	
	denominators (including mixed numbers) by		SB: 17-1 to 17-4,	
	replacing given fractions with equivalent		18-1, 18-2	
	fractions in such a way as to produce an		,	
	equivalent sum or difference of fractions with			
	like denominators. <i>For example, 2/3 + 5/4 =</i>			
	8/12 + 15/12 = 23/12. (In general, a/b + c/d =			
	ad + bc/bd.)			
2	,		25-27	
2	Solve word problems involving addition and			
	subtraction of fractions referring to the same		SB: 18-3, 18-4, 45-	
	whole, including cases of unlike		1, 45-3, 45-10	
	denominators, e.g., by using visual fraction			
	models or equations to represent the problem.			
	Use benchmark fractions and number sense of			
	fractions to estimate mentally and assess the			
	reasonableness of answers. For example,			
	recognize an incorrect result 2/5 + 1/2 = 3/7,			
	by observing that 3/7 < 1/2.			
5.NF.B.	Number & Operations—Fractions: Apply			
	and extend previous understandings of			
	multiplication and division.			
3	Interpret a fraction as division of the numerator		2, 3	
	by the denominator (a/b = $a \div b$). Solve word		SB: 11-3	
	problems involving division of whole numbers			
	leading to answers in the form of fractions or			
	mixed numbers, e.g., by using visual fraction			
	models or equations to represent the problem.			
	For example, interpret 3/4 as the result of			
	dividing 3 by 4, noting that 3/4 multiplied by			
	4 equals 3, and that when 3 wholes are			
	shared equally among 4 people each person			
	has a share of size 3/4. If 9 people want to			
	share a 50-pound sack of rice equally by			
	weight, how many pounds of rice should			
	each person get? Between what two whole			
	numbers does your answer lie?			

4	Apply and extend previous understandings of		
7	multiplication to multiply a fraction or whole		
	number by a fraction.		
4a	Interpret the product a/b × q as a parts of a	30-32	
44	partition of q into b equal parts; equivalently,	SB: 19-2, 19-4, 19-5	
	as the result of a sequence of operations $a \times q$	36. 19-2, 19-4, 19-5	
	•		
	÷ b. For example, use a visual fraction model		
	to show $2/3 \times 4 = 8/3$, and create a story		
	context for this equation. Do the same with		
	$2/3 \times 4/5 = 8/15$. (In general, a/b × c/d =		
	ac/bd.)		
4b	Find the area of a rectangle with fractional side		SB: 38-6
	lengths by tiling it with unit squares of the		
	appropriate unit fraction side lengths, and		
	show that the area is the same as would be		
	found by multiplying the side lengths. Multiply		
	fractional side lengths to find areas of		
	rectangles, and represent fraction products as		
	rectangular areas.		
5	Interpret multiplication as scaling (resizing), by:		
5a	Comparing the size of a product to the size of	29	
	one factor on the basis of the size of the other		
	factor, without performing the indicated		
	multiplication.		
5b.	Explaining why multiplying a given number by	28-30	
	a fraction greater than 1 results in a product		
	greater than the given number (recognizing		
	multiplication by whole numbers greater than		
	1 as a familiar case); explaining why		
	multiplying a given number by a fraction less		
	than 1 results in a product smaller than the		
	given number; and relating the principle of		
	fraction equivalence $a/b = (n \times a)/(n \times b)$ to		
	the effect of multiplying a /b by 1.		
6	Solve real-world problems involving	28-32	
	multiplication of fractions and mixed numbers,	SB: 19-1 to 19-5	
	e.g., by using visual fraction models or		
	equations to represent the problem.		
7	Apply and extend previous understandings of		
	division to divide unit fractions by whole		
	numbers and whole numbers by unit		
	fractions. (Students able to multiply fractions in		
	general can develop strategies to divide		
	fractions in general, by reasoning about the		
	relationship between multiplication and		
	division. But division of a fraction by a fraction		
	is not a requirement at this grade.)		
L	1.5 a roganomont at tino gradoi,	Ш	<u> </u>

-	I the first of the Parkers of the conflict of the contract of		1104	
7a.	Interpret division of a unit fraction by a non-		34	
	zero whole number, and compute such		SB: 20-3	
	quotients. For example, create a story context		1	
	for 1/3 ÷ 4, and use a visual fraction model to		1	
	show the quotient. Use the relationship		1	
	between multiplication and division to explain		1	
	that $1/3 \div 4 = 1/12$ because $1/12 \times 4 = 1/3$.		1	
7b.	Interpret division of a whole number by a unit		34	
/ b.	· · · · · · · · · · · · · · · · · · ·			
	fraction, and compute such quotients. For		SB: 20-2, 20-5	
	example, create a story context for 4 ÷ 1/5,		1	
	and use a visual fraction model to show the		1	
	quotient. Use the relationship between		1	
	multiplication and division to explain that 4 ÷		1	
	$1/5 = 20$ because $20 \times 1/5 = 4$.		1	
7c.	Solve real-world problems involving division of		34	
	unit fractions by non-zero whole numbers and		1	
	division of whole numbers by unit fractions,		1	
	e.g., by using visual fraction models and		1	
	equations to represent the problem. For		1	
	example, how much chocolate will each		1	
	person get if 3 people share 1/2 lb of		1	
	chocolate equally? How many 1/3-cup		1	
	servings are in 2 cups of raisins?

5.MD.A.	Measurement & Data: Convert like			
	measurement units within a given			
	measurement system.			
1	Convert among different-sized standard			31, 33-37, 39
	measurement units within a given			SB: 36-4, 36-6, 40-
	measurement system (e.g., convert 5 cm to			1, 40-2, 41-1, 41-2,
	0.05 m), and use these conversions in solving			42-1, 42-2
	multi-step, real-world problems.			
5.MD.B.	Measurement & Data: Represent and			
	interpret data.			
2	Make a line plot to display a data set of			
	measurements in fractions of a unit (1/2, 1/4, 1/8). Use operations on fractions for this grade			
	to solve problems involving information			
	presented in line plots. For example, given			
	different measurements of liquid in identical			
	beakers, find the amount of liquid each beaker			
	would contain if the total amount in all the			
	beakers were redistributed equally.			
5.MD.C.	Measurement & Data: Geometric	 		
J.IVID.C.	measurement & Data: Geometric measurement: Understand concepts of			
	volume and relate volume to multiplication			
	and to addition.			
3	Recognize volume as an attribute of solid			
	figures and understand concepts of volume			
	measurement.			
3a.	A cube with side length 1 unit, called a "unit			52
	cube," is said to have "one cubic unit" of			
	volume, and can be used to measure volume.			
3b.	A solid figure which can be packed without			52
	gaps or overlaps using <i>n</i> unit cubes is said to			
	have a volume of <i>n</i> cubic units.			
4	Measure volumes by counting unit cubes,			52, 53
	using cubic cm, cubic in, cubic ft, and			SB: 39-1, 39-2, 39-5
	improvised units.		<u> </u>	

5 Relate volume to the operations of multiplication and addition and solve realworld and mathematical problems involving volume. 5a. Model the volume of a right rectangular prism	
world and mathematical problems involving volume. 5a. Model the volume of a right rectangular prism 53	
volume. 5a. Model the volume of a right rectangular prism 53	
with whole-number side lengths by packing it SB: 39-	-2, 39-3
with unit cubes, and show that the volume is	
the same as would be found by multiplying	
the edge lengths, equivalently by multiplying	
the height by the area of the base. Represent	
threefold whole-number products as volumes,	
e.g., to represent the associative property of	
multiplication.	
5b Apply the formulas $V = I \times w \times h$ and $V = b \times 1$	0 00 0
	-2, 39-3
right rectangular prisms with whole-number edge lengths in the context of solving real-	
world and mathematical problems.	
5c. Use the additive nature of volume to find SB: 39	.7
volumes of solid figures composed of two	
non-overlapping right rectangular prisms by	
adding the volumes of the non-overlapping	
parts, applying this technique to solve real- world problems.
